# 1 Introduction

This Interoperability Conformance Specification (ICS) document standardizes business transactions between a *Print Buyer* and a *Print Provider*. In particular, this document defines a subset of the **XJDF** and **PrintTalk** specifications which has relevance for automated print procurement. The price negotiation workflow that is defined by the **RFQ** and **Quotation** business objects in **PrintTalk** is explicitly out of scope for this ICS.

The ICS document describes the workflow business objects required for submitting jobs from a *Print Buyer* to a *Print Provider* and mechanisms for the *Print Provider* to either accept or refuse the job and to provide the *Print Buyer* with job status information. Jobs can either be completely specified in detail for blind exchange or reference pre-negotiated product configurations by identifier that have been synchronized offline.

## 1.1 Glossary

This section defines the terms and definitions that are required for quality measurements. For general **XJDF** and **PrintTalk** terms please see ▶ [XJDF 2.0] and ▶ [PrintTalk] respectively.

Table 1.1: Glossary

TERM	DEFINITION
<b>Blind Exchange</b>	Defines a complete <i>Business Transaction</i> where no <i>Out of Band</i> synchronization of identifiers is required.
<b>Business Object</b>	The portion of a <b>PrintTalk</b> document that describes a <i>Business Transaction</i> . For example an <b>PurchaseOrder</b> <i>Business Object</i> describes a purchase order <i>Business Transaction</i> .
<b>Business Transaction</b>	When a <i>Print Buyer</i> sends a <b>PrintTalk</b> document to a <i>Print Provider</i> , or a <i>Print Provider</i> sends a <b>PrintTalk</b> document to a <i>Print Buyer</i> , the <i>Business Object</i> within the <b>PrintTalk</b> document describes a business transaction between the <i>Print Buyer</i> and <i>Print Provider</i> .
<b>Manager</b>	The software that implements the manager interface. The <i>Manager</i> software is used by the <i>Print Buyer</i> .
<b>MIS</b>	Management Information System or production workflow system.
<b>Out Of Band</b>	The exchange of meta data that is not conveyed using <b>XJDF</b> or <b>PrintTalk</b> .
<b>Print Buyer</b>	The customer that is buying a <i>Print Product</i> .
<b>Print Product</b>	The printed matter produced by the <i>Print Provider</i> according to the specifications from the <i>Print Buyer</i> .
<b>Print Provider</b>	The producer of the <i>Print Product</i> .
<b>Worker</b>	The software that implements the worker interface. The <i>Worker</i> software is used by the <i>Print Provider</i> .

## 1.2 Specification of cardinality

### 1.3 General Architecture

All transactions in an automated print procurement environment SHALL conform to **PrintTalk 2.0**. Each **PrintTalk** document SHALL contain a business object. Job descriptions shall be specified as **XJDF**.

#### 1.3.1 Transport Protocol

*Manager* and *Worker* shall implement the bidirectional transport protocol according to ▶ [PrintTalk]. Implementation of the unidirectional transport protocol is outside of the scope of this ICS.

#### 1.3.2 XML and ZIP Packaging

Conforming data SHALL be packaged either as a ZIP stream or as raw XML. Raw XML SHALL be accepted by conforming readers. ZIP packaging SHOULD be accepted by conforming readers. Conforming writers SHALL be capable of writing raw XML and SHOULD be capable of writing ZIP streams.

For details of ZIP and raw XML packaging, see ▶ [PrintTalk]

#### 1.3.3 Availability of Referenced Assets

Referenced assets such as pdf files SHALL be available for download until a **Confirmation** or a **Refusal** *Business Object* has been received by the *Manager* or the deadline that was defined in **PurchaseOrder/@Expires** has been reached.

### 1.4 Security

It is strongly encouraged to use encryption technology for security and authentication. For details see ▶ [PrintTalk].

## 2 PrintTalk Requirements

This chapter describes the requirements of the **PrintTalk** business objects to support automated print procurement.

### 2.1 PrintTalk

The **PrintTalk** element shall be the root element of each *Business Transaction*.

If not specified, the product part is assumed to be required once per final product.
<i>ExternalID</i>	w?		If present, <i>@ExternalID</i> SHALL identify a product type. ▶ [XJDF 2.0]. <b>Note:</b> The presence of this attribute prohibits <i>Blind Exchange</i> .
<i>IsRoot</i>	w	r	If <i>@IsRoot="true"</i> , this <i>xjdf:Product</i> element describes either a self-contained product or describes the root product part of a multi-part product description. If <i>@IsRoot="false"</i> , this <i>xjdf:Product</i> element is a product part of another <i>xjdf:Product</i> , such as a cover or body of a brochure.
<i>xjdf:GeneralID</i> [ <i>@IDUsage="LineID"</i> ]	w←	r	<i>xjdf:GeneralID</i> / <i>@IDValue</i> SHALL reference the <i>Pricing/Price</i> / <i>@LineID</i> of the pricing element that describes the price of this <i>Print Product</i> .
